

Responsible
and sustainable
management
of chemicals
and waste

A lush green forest scene with a waterfall cascading over mossy rocks. The foreground is dominated by large, rounded rocks covered in vibrant green moss. The waterfall flows from the left side of the frame, creating a misty spray at the base. The background is filled with dense, sun-dappled foliage, including large, dark green leaves in the upper left corner.

Last year
CleanPlanet Customers:

*Put an additional \$75M
directly to their bottom lines*

*Recovered more than 8M
gallons of spent chemicals*

*Reduced greenhouse gases by
nearly 200M pounds*

CleanPlanet Chemical is changing the way companies acquire chemicals and manage waste.

Recover your spent chemicals onsite without buying or leasing equipment.

The days of collecting spent chemicals and managing hazardous waste streams are over. You can forget the manifests and the liabilities because CleanPlanet has a better way – A way for you to **cut chemical costs by at least 20% and reduce hazardous waste by more than 80%**. All without buying, leasing or maintaining equipment.

It's true. CleanPlanet will provide the appropriate recycling equipment free of charge. There are no maintenance fees, repair costs or contracts. Whether you recover 100 gallons a month or 1,000 gallons a day, you will only pay for the virgin quality, recovered chemical – at a significantly lower cost. Guaranteed!

CleanPlanet Chemical transforms your chemical waste into reusable, virgin-quality, product.

We provide the recycling equipment absolutely free.

You only pay for the recovered chemicals at a 20% discount. Guaranteed.

You reduce your hazardous waste by as much as 80%.

No capital investment • No maintenance costs • No obligations or risks

The CleanPlanet solution is supported by three key pillars.

Cut chemical costs and reduce hazardous waste while supporting your sustainability efforts – All without investment or risk.

First is the **savings** companies seek as chemical prices continue to escalate at unprecedented rates.

With CleanPlanet, you only pay for the good, usable, recovered chemical at a rate that's 20% less than your current supplier. Guaranteed.

The second pillar are the **liabilities** connected to the collection, storage, transportation and disposal of hazardous waste.

Instead of disposing of your spent chemicals as hazardous waste, CleanPlanet converts this "waste" into clean, virgin-quality product – Ready to be used over and over and over.

The third pillar is **sustainability**, which is a mission critical task for all of us.

CleanPlanet supports your sustainability efforts by preserving one of Earth's most precious resources and reducing the release of greenhouse gases.

Lower costs, reduced waste and improved sustainability translates into clear bottom-line performance.

And because CleanPlanet provides the equipment absolutely free, the impact is immediate.

Lower Costs • Reduce Liabilities • Improve Sustainability

CleanPlanet's revenues are based **solely** on the amount of chemicals recovered, therefore our objectives are completely aligned with yours.

CleanPlanet Chemical is a true business partner with shared objectives

- Provide Superior Quality Chemicals
- Generate the Highest Yield
- Support Your Existing Operation
- Deliver Uninterrupted Service
- Cut Chemical Costs
- Reduce Hazardous Waste
- Protect the Environment

And because there are no contracts, CleanPlanet earns your business each and every day. One gallon at a time.

Every day lost has a real cost

Not recovering your spent chemicals reduces profits with each passing day. But there's more at stake than just the bottom-line. Each gallon of chemical that could have been recovered, needlessly creates hazardous waste that must be transported through our communities and ultimately incinerated; then released into our air. And once that petrochemical is burned, one of Earth's most precious resources is gone. Forever. So stop burning your spent chemicals and your profits. Contact us today.

“We've found savings in both the reduced amount of solvent purchased and the reduced amount of waste shipped. I'm a big advocate.

- Process Engineer
Steelscape

“ We are presently recovering 70-80% of our spent solvent and expect our annual savings to exceed \$50,000.

- Systems Coordinator and EHS Manager
Consolidated Metco

Before making any decisions we want you to try our service for free without any obligations or commitments.

Free onsite demo

Thousands of CleanPlanet customers already know the value of using our innovative solution for onsite chemical recycling. Now you can too. CleanPlanet begins each relationship by proving its performance at your site, using your waste. All without any cost or obligation on your part.

CleanPlanet will determine which system(s) best suits your needs. We will then ship and install this system at your site. Not only do you not spend any money, you'll spend very little time because CleanPlanet handles it all.

Should you decide to continue the service after the free demo, and we're betting you will, we will show your staff how to operate the equipment and activate your service.

You will only be charged for the good, reusable chemical recovered from the system. If for any reason you choose not to continue service, CleanPlanet will promptly be onsite to pickup the equipment, because there's no fine print and no contracts. Just virgin-quality chemicals at reduced rates and with less waste.

After 20 years in the trenches, CleanPlanet understands the key concerns of its users, which are Quality, Time, Labor and Floor Space.

We understand your concerns. That's why we prove it first.

Chemical Quality

CleanPlanet technology, installed at more than 7,000 customer locations, is used in virtually every industry including those with exacting environments such as hospitals, laboratories, aerospace and high-tech. In many cases CleanPlanet's recovered chemicals are more pure than the virgin product previously used by our customers.

Time to Implement

CleanPlanet knows that time is money. That's why we do most of the work for you. In fact we will have you up and running in less than two hours; and that includes researching your chemical specifications, analyzing your waste streams and teaching your staff how to operate this game-changing equipment.

Labor Requirements

In most cases CleanPlanet helps customers do more with less. Moving waste to our equipment and pressing "Start" takes less time than moving, labeling and manifesting your current waste streams. You will also spend less time managing your chemical inventories and worrying about stock-outs.

Space Constraints

CleanPlanet helps you reclaim that valuable floor space that is currently used for storing and shipping hazardous waste. In fact our largest, high-capacity system requires the space of a single pallet, while our smallest unit takes up about as much space as your desk chair.

“ Our annualized savings will exceed \$100,000 and that doesn't include the savings we will gain by reducing our waste by 85-90%.

- Environmental Compliance Technician
Aerospace Manufacturer

CleanPlanet even makes getting started easy. Simply contact CleanPlanet and we'll quickly implement our proven three-step process so you can start saving immediately.

3 simple steps to getting started

1. Qualification

CleanPlanet only needs three things to qualify your application: Type of solvent/chemical; type of contaminant and monthly waste volume.

2. Demo

CleanPlanet will install and configure the equipment at your site free of charge.

3. Activate

Once you are completely satisfied with the quality of the recovered chemicals and the simplicity of the process, we will activate your service.

CleanPlanet proudly services more than 7,000 customers

Companies across North America turn to CleanPlanet to reduce chemical costs and liabilities, as well as to improve their sustainability efforts. CleanPlanet customers include local and regional operations as well as major international corporations including (partial list only):

CleanPlanet can recycle almost any chemical-based waste

CleanPlanet has a recycling technology for almost any chemical waste application. The list of chemicals is too lengthy to detail individually; however, the most common ones are listed below. For more information on types of recoverable chemicals please contact us at 855-256-7568.

Acetate	Mineral Spirits
Acetone	Naphtha
Ethyl Acetate	NMP
Hexane	N-Propanol
IPA	N-Propyl Bromide
Kerosene	Paint Thinners
MAK	Pentane
MEK	Toluene
Methyl Alcohol	Xylene

*From 5 gallons to 1,000 gallons per day,
we have a solution for you.*

The CleanPlanet Chemical story: A twenty-year overnight success

This new model for onsite chemical recycling can be traced back more than twenty years ago when the company introduced its first line of chemical recycling equipment. The company enjoyed success early on and quickly established itself as an industry leader as more and more distributors began selling its equipment.

While success was sweet, the company was not capturing its long-term vision to usher in a new era of responsible and sustainable chemical waste management.

CleanPlanet knew they would have to reinvent themselves in order to achieve this lofty mission. Armed with laptops and clipboards, the company hit the streets and began interviewing the market to uncover the good, the bad and the ugly of chemical recycling. The company met with EH&S and sustainability personnel. They met with purchasing departments. Finance departments. Shop foremen. End users – Anybody that was remotely connected to the purchase, consumption or disposal of chemicals.

Key Takeaways

After compiling and analyzing the hoards of data, the company challenged its engineers and marketing department to address the three most critical obstacles facing the marketplace.

The first was scalability. Traditional distillation technology was limited by the types and quality of chemicals that could be recovered.

The second challenge was money related, as customers often did not have the available capital to purchase the equipment. And when the funds were available, people didn't want to go through the typical, lengthy approval process required for capital allocations.

The third challenge was usability. The companies that did purchase the equipment soon learned that their units required frequent adjustments in order to optimize chemical quality and maximize throughput. Maintenance and supply requirements further complicated ownership, so inevitably the equipment was tucked away in a remote corner of the shop, never to be used again.

After isolating the obstacles the engineers quickly devised a plan to produce a more robust distillation technology. Simultaneously, the marketing team began developing a new strategy for taking this next generation of recycling equipment to market.

New Technology

The new technology took distillation to a whole new level by combining traditional, temperature-based separation with advanced micro-processors. This innovative, advanced approach automatically senses the chemicals to be recovered. The system also automatically sets the recovery time, temperature and power levels. This enabled a broader

selection of chemicals to be recovered with unprecedented quality and quantity. This remarkable breakthrough is reshaping the industry by:

- Recovering up to 99% of spent chemicals
- Delivering quality that is often better than the virgin product
- Enabling the recovery of almost any petroleum-based chemical or solvent

Last year CleanPlanet Customers:

*Put an additional \$75M
directly to their bottom lines*

*Recovered more than 8M gallons
of spent chemicals*

*Reduced greenhouse gases by
nearly 200M pounds*

The new systems also include a number of enhanced safety features such as the patented anti-pressure system and the temperature control system.

Pay for Clean, Reusable Chemicals; Not Equipment

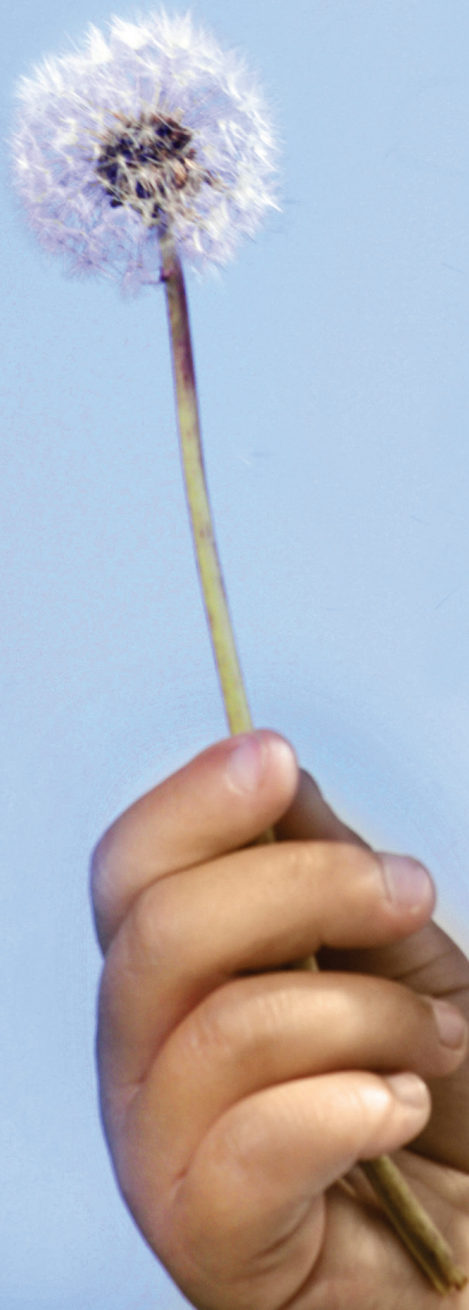

The marketing team, not to be outdone by the engineers, created an equally impressive and innovative program that enabled customers to get the benefits of onsite chemical recycling without buying equipment. In fact CleanPlanet removed all the costs connected to the equipment by placing the appropriate unit onsite free of charge, and then taking care of all maintenance and supplies.

No Obligation. No Risk.

To make the new proposition even more appealing, CleanPlanet offers its service with no contracts or long-term obligations. CleanPlanet knows its success will come from partnering with its customers and working collaboratively to cut costs, reduce waste and improve sustainability. In other words, CleanPlanet Chemical believes in earning its customers' business, one gallon at a time.

Lower costs, reduced waste and improved sustainability translates into clear bottom line performance.

And because CleanPlanet provides the equipment absolutely free, the impact is immediate.
